Characteristic

Graepel-Star has upward and downward formations. Its surface is characterized by embossed, star-shaped openings (d = 16 mm) and debossed holes (d = 4.5 mm). The perforation extends about 4.5 mm upwards. The open area for standard grating widths is approximately 21 %. Graepel-Star offers excellent slip resistance, a wide displacement space and a certain drainage. The maximum embossed field is 460 mm.

Application

Its look was influential in the naming of this perforation. Graepel-Star is especially suitable for use in industrial applications where lubricants put underfoot safety at risk: The serrated edges of the holes with upward-pointing tips ensure a high slip resistance. The drainage holes discharges these liquids downwards into appropriate collection trays.

Options

- This perforation is program controllable. Thus, individual embossments can be created.
- The standard edge perforation may be omitted.
