

# Graepels Lightprofile Grating

Shaping the Future, Safety for People & Machines | Graepels

CNC Perforating | Wire Weaving | Laser Cutting | Metal Fabrication

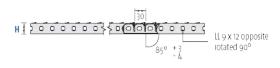

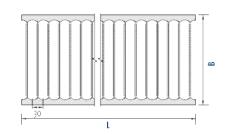

ISO 9001 Accredited by NSAI & UKAS | CE Accredited EN 1090

Servicing the Industry Since 1889 Est. 1959

### Characteristic

Graepel-Lightprofile has a unique cut and rotated formation. Its surface is characterized by almost vertical bars with serrated edges which allow for an almost unlimited view through the grating. Depending on the grating width, the open area is between 74 and 80 %, thus reaching the highest value of all Graepel perforations.

Graepel-Lightprofile offers an extreme drainage effect, excellent slip resistance and displacement as well as a high transverse stiffness. The maximum embossed field is 370 mm.

# Application

Graepel-Lightprofile is essential in machine and plant manufacture wherever precipitation or high dirt volumes put underfoot safety at risk. They are used as walking surfaces on crushers and agricultural machines, as coverings capable of being walked on for bunkers and pits with cohesive loose goods such as grains or ground particles. Also as walkways in areas with extreme precipitation, e.g. for ski lifts, and wherever it is extremely windy, for instance on crane arms etc. Platforms made of Graepel-Lightprofile ensure underfoot safety for maintenance purposes without obstructing visibility to the work area. As an alternative to open mesh flooring, Graepel-Lightprofile provides wider support widths and additional slip resistance with a similar open surface.

### **Options**

• The standard edge perforation may be omitted.

	Dimensions	Graepel-Lightprofile
Material thickness	DD 11 raw DD 11 hot-dip galvanized   DX 51 D pre-galvanized Stainless steel EN AW-5754	2.0   2.5   3.0 mm 2.0   2.5   3.0 mm 2.5   3.0 mm 2.5   3.0 mm

### Note concerning lump load

The values are calculated for gratings which are supported over their whole length. For a given span width, the values stated in this lump load table must not exceed those given in the concentrated load table.

For **stainless steel**, the values in the table must be multiplied by a factor of **1.04** or for **EN AW-5754** by a factor of **0.75**.

### Order information

The gratings are available up to a length of 6,000 mm.

Upon request, the gratings are cut to length. Please specify the required length when ordering. Please take account of the length divider of 30 mm.

Hot-dip galvanized gratings are hot-dip galvanized after sawing to ensure optimum corrosion protection.

# Case Study

# The Museum of Military

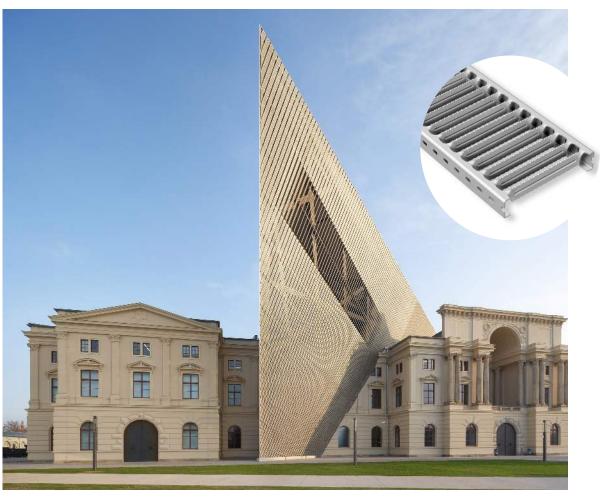

The Museum of Military History in Dresden, designed by Daniel Libeskind, stands as a remarkable example of deconstructivist architecture. Its striking angular facade and dramatic protrusions are achieved using innovative materials and techniques, one of which is the Graepel metal light profile.

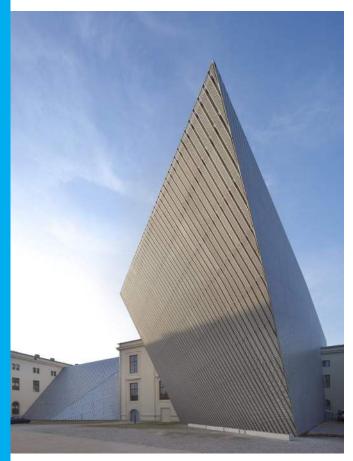

Graepel's perforated metal profiles are ideal for architectural applications requiring aesthetic appeal, structural integrity, and functionality. In this project, the metal panels contribute to the building's dynamic appearance while maintaining practicality. The perforations play with light and shadow, adding texture to the museum's facade. They also align with Libeskind's intent to convey complexity and provoke thought about the contradictions of war.

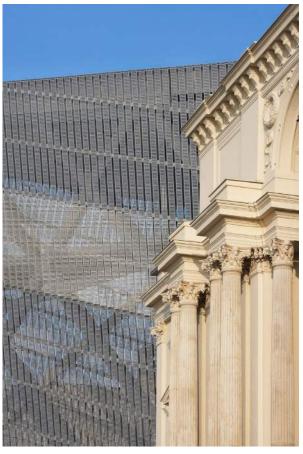

Additionally, Graepel profiles support the building's environmental goals by reducing material usage without compromising strength. Their durability ensures longevity, and the perforations facilitate ventilation and light diffusion, which are particularly relevant in cultural and public buildings.

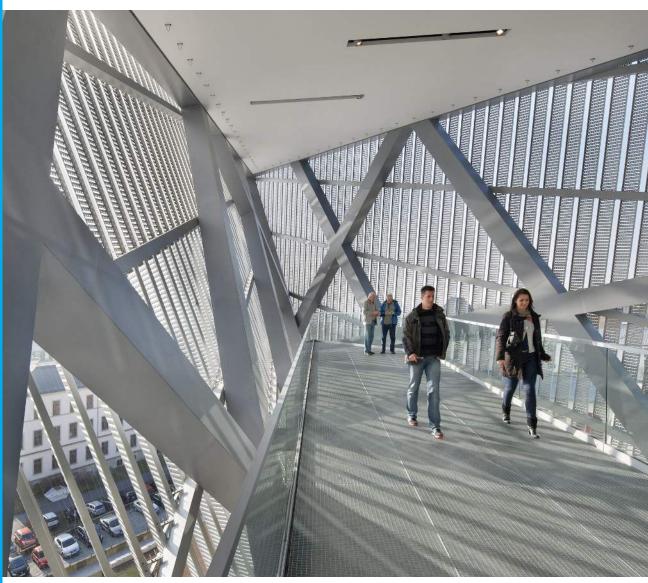

The use of Graepel's metal profiles in the Museum of Military History underscores their versatility, blending cutting-edge architectural aesthetics with functional excellence. This project highlights how Graepel's products can enhance iconic modern designs, reinforcing their role in architectural innovation.

Note this project was undertook between Graepel Germany supplier and manufacture for Graepels UK and Ireland.
